ODYSSEY

DIGITAL LOYALTY

Shop Owner & Staff Manual

How to set up your shop, give stamps, redeem rewards and keep track of your loyalty programme, step by step.

> Written for shop owners, managers and baristas. Keep it with your counter equipment.

Version 1.0 · November 2026
Product Digital Loyalty: NFC and QR stamp cards, no app download
Prepared by ODYSSEY

BEFORE YOU START

Your account details

Your account manager fills in this page when your shop is set up. Keep it somewhere safe. You'll need these addresses throughout this manual.

Shop name

Shop ID (slug)
Short name used in your addresses

Loyalty site address
Written as *yoursite* in this manual

Customer card page
yoursite/s/*your-slug*

Staff sign-in
yoursite/staff/login

Owner console
yoursite/staff/*your-slug*/settings

Owner email (sign-in)

Plan chosen

Support contact

Go-live date

TIP

Bookmark the **Staff sign-in** and **Owner console** addresses on every shop device. You reach the owner console by its address; there's no link to it from the staff home screen.

CONTENTS

What's inside

01 How the programme works — The customer journey and your team's roles

02 Signing in — First login, everyday login, several shops

03 Setting up your shop — Rules, brand, branches, team, plan

04 NFC tags & counter QR — Create, write, lock, test and replace tags

05 At the counter — Stamps, rewards, perks, manual stamps

06 Your customers' experience — What they see and can do

07 Monitoring your shop — Activity, warning flags, usage, exports

08 Troubleshooting & FAQ — Common situations and what to do

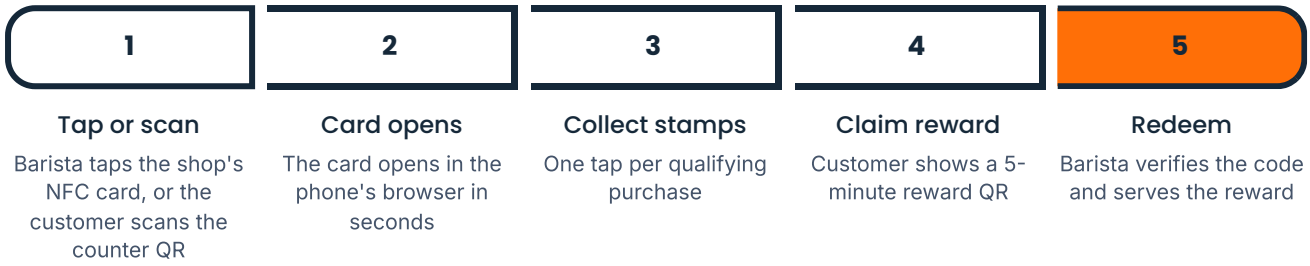

09 Counter quick reference — One page to print and keep at the till

01

How the programme works

Your customers carry a digital stamp card on their phone. There's no app to install and no form to fill in. Your baristas tap a small NFC card on the customer's phone to add a stamp.

The customer journey

Built-in fraud protection

The system enforces your rules automatically. You don't need to police them at the counter.

- **Cooldown:** a minimum time between two stamps for the same customer.
- **Daily cap:** the most stamps one customer can collect per day.
- **Tag throttle:** stops the same NFC card being tapped repeatedly within a few seconds.
- **Single-use reward codes:** each reward QR expires after 5 minutes and works only once, so screenshots can't be reused.

Your team's roles

TASK	STAFF	MANAGER	OWNER
Redeem rewards and perks	✓	✓	✓
Give a manual stamp	✓	✓	✓
View activity, warning flags, tag addresses and the team list	✓	✓	✓
Create, replace and switch off NFC tags	—	✓	✓
Edit card branding and download data exports	—	✓	✓
View rules, plan and monthly usage; preview rule changes	—	✓	✓
Save rule changes	—	—	✓
Invite people and change roles	—	—	✓
Manage branches	—	—	✓
Choose the billing plan	—	—	✓

02

Signing in

Everyone on your team signs in at the same page, `yoursite/staff/login`, with their own email address. Please don't share logins: every action is recorded against the person who did it.

First sign-in (new owners and new team members)

1. Your invitation is created for one exact email address, by your account manager (for owners) or by your shop owner (for team members). Invitations expire after **14 days**.
2. Open `yoursite/staff/login` and choose the **Magic Link** tab.
3. Enter **exactly the invited email address**, wait for the security check to finish, then tap **Send Magic Link**.
4. Open the email and tap the sign-in link. This creates and confirms your login.
5. The first time, you may see *"Access denied: This account does not have active staff permissions."* That's normal. Tell your account manager (or your shop owner) that you've signed in, and they'll activate your access.
6. Once you're activated, sign in again and you'll land on the **Operations Console**.

IMPORTANT

Invitations are not sent by email automatically. After someone is invited, let them know personally and tell them which email address to use.

Everyday sign-in

Open `yoursite/staff/login`, choose **Password** (if you've been given one) or **Magic Link**, wait for the security check, and sign in. On a shared device, tap **Sign Out** at the top right when you're done.

Working at more than one shop

If you belong to several shops, a **Shop** drop-down appears at the top of the staff screens. Choose the shop you're serving before you redeem or stamp. Everything you do applies to the selected shop.

The staff home screen

MENU ITEM	USE IT FOR
Redeem Reward	Scanning a customer's reward or perk code (the everyday task)
Manual Stamp	Adding a stamp when a customer's phone can't tap
NFC Tags	Viewing and copying tag addresses (managers can also create tags)
Activity & Audit	Recent stamps and rewards, plus warning flags
Plan & Billing	Monthly usage and plan (owners and managers only)

03

Setting up your shop

Owners and managers set the shop up in the **owner console** at `yoursite/staff/your-slug/settings`. The console has six tabs across the top: Rules, Brand, Staff, Tags, Export and Branches.

YOUR STARTING SETTINGS

Every new shop starts with: 10 stamps for one reward called "FREE COFFEE", a 30-minute cooldown, a cap of 2 stamps per customer per day, and a 5-second tag throttle. You can change any of these.

Rules tab

Managers can view the rules and preview changes. Only the owner can save them.

SETTING	ALLOWED RANGE	WHAT IT DOES
Reward Threshold	3–50 stamps	Stamps needed to earn one reward
Reward Label	Up to 40 characters	The reward name customers see, for example *FREE COFFEE*
Cooldown Period	0–1440 minutes	Minimum time between two stamps for one customer
Daily Cap	1–20 stamps	Most stamps one customer can collect per day
Tag Anti-Burst Throttle	0–60 seconds	Minimum gap between two taps on the same NFC card

1. Change the values you want.
2. Run the **preview**. The **Customer Impact Preview** shows how many existing cards become eligible for a reward straight away, and how many are still collecting.
3. Save. You'll see *"Rules successfully updated."* The new rules apply to the next tap.

TIP

Lowering the reward threshold can make many customers eligible at once. Check the preview, and brief your baristas before you save.

Brand tab

1. Choose a **Primary Card Color** (the background) and an **Accent Color** (stamps and text) as colour codes, for example `#0A0A0A`.
2. Add a short **Shop Tagline**.
3. Upload your **Shop Logo** and, if you like, **Card Art**. Use PNG, JPEG or WebP files of 512 KB or less; SVG isn't accepted.
4. Check the **Live Card Preview**, then save.

If your two colours are too similar to read easily, the card automatically switches to a readable colour pair.

Branches tab (owner only)

Your shop starts with one branch. Add a branch for each physical location so you can see where each stamp was given.

1. Under **Add New Branch Location**, enter a name (for example *Ayala Malls Manila Bay*) and, optionally, an address.
2. Use **Edit Details** to rename a branch, or untick **Active** to stop stamping there.

All branches share one card by default: the same stamps, rules and limits wherever the customer visits.

PERMANENT ACTION

Give this branch its own card turns a branch into a separate shop with its own card, rules, team and billing. Customers keep their existing stamps on the main card and start a new card at that branch. **This can't be undone.** Talk to your account manager first.

Staff tab

1. Under **Invite New Team Member** (owner only), enter the person's email address and choose **Staff**, **Manager** or **Owner**, then tap **Send Invite**.
2. Tell the person their invitation is ready, and follow *First sign-in* in chapter 02.
3. Under **Team Members**, change someone's role from the drop-down, or tap **Deactivate** when they leave. Their history is kept, and you can tap **Reactivate** later.
4. Each invitation shows as **Pending**, **Accepted** or **Expired**.

Plan & Billing

You only pay for **active customers**: customers who collected at least one stamp that month. Customers who only hold your card are free.

PLAN	MONTHLY FEE	PER ACTIVE CUSTOMER	BEST FOR
Pay as you go	₱0	₱10	New or seasonal shops
Starter 50	₱350 (includes 50)	₱7 after 50	Small, steady shops
Growth 200	₱1,000 (includes 200)	₱5 after 200	Busy shops
Worry-free cap	₱0	₱8, never more than ₱1,200 a month	Shops that want a fixed ceiling

- On **Plan & Billing** you can see this month's active customers and your **Bill so far**. During your trial it reads **Would cost**, and you aren't charged.
- Type a number into **"If I had ___ active customers"** to compare the plans.
- Only the owner can choose a plan. After your first choice, a change starts at the beginning of next month, so each month has one price.

04

NFC tags & counter QR

An NFC tag is a small card or sticker your barista taps on the customer's phone. Each tag carries one web address that belongs to your shop. Managers and owners create the tags. Allow about five minutes per tag.

What you need

- **NXP NTAG215** cards or stickers. Don't use NTAG213 (too small) or Mifare Classic (iPhones can't read them).
- A phone with NFC switched on
- The free **NFC Tools** app (or NXP TagWriter)
- An acrylic stand for the counter QR

Good practice

- Give each tag a clear label, for example *Counter Register #1*.
- Always lock the tag after writing it.
- Keep tags behind the counter, out of customers' reach.
- Keep one spare tag ready to write.

Step 1: Create the tag

1. Open the console's **Tags** tab (`yoursite/staff/your-slug/settings/tags`).
2. Under **Provision New NFC Tag**, type a **Tag Label** and choose the branch under **Assign Branch Location**.
3. Tap create. The new tag appears under its branch.
4. Tap **Copy** next to its **Production Tap URL**.

Step 2: Write the tag

1. Open NFC Tools and go to **Write** → **Add a record** → **URL / URI**.
2. Paste the address you copied and tap **OK**.
3. Tap **Write** and hold the tag against the phone: the top of the back on an iPhone, the centre of the back on Android. Hold it still until the phone confirms.

Step 3: Lock the tag

DON'T SKIP THIS

Anyone with a free app can rewrite an unlocked tag and point it somewhere else.

- **Recommended:** NFC Tools → **Other** → **Set Password**. You can still rewrite the tag later with the password, so keep the password in a safe place.
- **Permanent:** NFC Tools → **Other** → **Lock tag**. The tag can never be changed again.

Step 4: Test the tag

1. Close NFC Tools and tap the tag on a phone.

2. The shop card should open showing **STAMP COLLECTED**.
3. Tap again with the same phone. You should see **COOLDOWN ACTIVE**, which shows the protection is working.

Replacing a lost, damaged or shared tag

If a tag goes missing, or you think someone has copied its address, replace it at once. This takes about 10 seconds.

1. In the **Tags** tab, find the tag and tap **Rotate**.
2. The old address stops working immediately, and a new tag with the same label appears.
3. Write the new address onto a fresh tag (or unlock and rewrite the old one), then lock it.

To stop a tag without replacing it, tap **Deactivate**.

The counter QR

The counter QR lets first-time customers get their card while they wait. It points to your customer card page, `yoursite/s/your-slug`.

- Your account manager can supply print-ready QR artwork. You can also make one yourself with any QR code generator, using your customer card page address.
- Print the QR at **100% scale**, not "fit to page", and place it where customers queue.

05

At the counter

These are the everyday tasks for your baristas. Chapter 09 has a one-page version to print and keep at the till.

A new customer

- **Quickest:** tap the NFC tag on their phone. A first-timer sees *"Claim your first stamp"*, taps the get-card button, and the first stamp is added automatically.
- **Or:** they scan the counter QR and tap **GET MY CARD**. The card starts with 0 stamps.
- Customers don't install an app or fill in a form.

Giving a stamp

Hold the tag flat against the phone: the **top back edge** of an iPhone, or the **centre back** of an Android phone. If nothing happens on Android, ask the customer to turn on NFC in their quick settings. Then check the banner on their screen:

BANNER	WHAT IT MEANS AND WHAT TO DO
STAMP COLLECTED	Done. One stamp was added.
COOLDOWN ACTIVE	The customer got a stamp too recently. They can get the next one after the cooldown.
DAILY CAP REACHED	The customer has collected today's maximum. They can collect again tomorrow.
TAP THROTTLED	The tag was tapped twice too quickly. Wait a few seconds and tap once.
INACTIVE NFC TAG	This tag has been switched off. Tell a manager, and give this customer a manual stamp.
SHOP PAUSED	Stamping is paused for your shop. Contact your account manager.

Redeeming a reward

1. When the customer has enough stamps, they tap the claim button on their card. A QR code appears with an 8-character check code (`XXXX-XXXX`) and a 5-minute timer.
2. On the shop device, open **Redeem Reward**.
3. Scan the QR into the **Customer Redemption Token** box, using one of these:
   - a USB or Bluetooth barcode scanner (recommended), which types the code straight into the box; or
   - a QR-reader app on the shop device: scan, copy the text, and paste it into the box.
4. Tap **Verify Token & Check Balance**.
5. Check that the 8-character code on your screen **matches the one on the customer's phone**, and that it says **ELIGIBLE FOR ...**.
6. Confirm the redemption. The stamps are deducted and the code can't be used again. Serve the reward, then tap **Scan Next Customer**.

NOTE

The 8-character code is for checking by eye only. You can't type it into the box instead of scanning the QR. If the code has expired, ask the customer to tap **Refresh QR Code** on their phone.

Instagram "follow us, size up" perk (if your shop offers it)

1. The customer follows your shop on Instagram, then taps **CLAIM UPSIZE**.
2. Scan and verify their code, the same way as a reward. The screen shows the free upsize perk.
3. Ask the customer to open your Instagram profile on their phone. The button must read **Following**.
4. Tap **Follow Checked — Grant Free Upsize**. No stamps are used. Each card can claim the upsize once. If you see **UPSIZE ALREADY USED**, it has already been claimed.

To turn this perk on, or change your Instagram handle, contact your account manager.

Manual stamp (when a phone can't tap)

1. Open **Manual Stamp**.
2. Enter the customer's **full card ID**. Their card only shows the first 8 characters (*Card #XXXXXXXX*), so a manager can find the full ID by matching those 8 characters in **Activity & Audit** or the **Cards** export.
3. Enter a reason, for example *"Phone NFC not working; receipt #4092"*. A reason is required and is recorded.
4. Submit, and check for **STAMP RECORDED — RESULT: STAMPED**. The cooldown and daily cap still apply.

TIP

Use manual stamps only when you have to. Several manual stamps for the same customer raise a warning flag for your manager.

06

Your customers' experience

Knowing what customers see helps your team answer their questions at the counter.

CUSTOMER WANTS TO…	HOW THEY DO IT
See their card	Open your customer card page, or tap your NFC tag. The card shows their stamps, their total earned and their reward.
See all their cards	`yoursite/wallet` lists every participating shop's card on their phone.
Keep their stamps safe	Tap **Back up with Google** or **Back up with Email** on the card. Their stamps then survive clearing the browser or changing phones.
Move to a new phone	Use **Recover** with the same Google account or email. Cards from both phones are combined.
Remove your shop's card	Tap **Remove this card** at the bottom of your card page. This deletes only your shop's card.
Delete all their data	Tap **Delete my wallet & data** on the wallet or privacy page. This erases everything.
Read the privacy notice	`yoursite/s/your-slug/privacy`

PRIVACY

The programme follows the Philippines Data Privacy Act of 2012 (RA 10173). Customers start anonymously: no name, phone number or email is needed. Anonymous visitors who never collect a stamp are deleted automatically after 30 days. Your exports contain anonymous card IDs only, never emails or phone numbers.

TELL CUSTOMERS TO BACK UP

If a customer hasn't backed up and clears their browser or loses their phone, their stamps can't be recovered. A quick "tap Back up to keep your stamps safe" at the counter prevents most complaints.

07

Monitoring your shop

The system watches for unusual activity and highlights it for you. A few minutes a week is usually enough.

Activity & Audit (all roles)

Shows your shop's last 50 stamps (manual ones are labelled MANUAL), the last 50 redemptions and the last 50 recorded events. **Anomaly Flags** at the top highlight anything unusual, graded WARNING or HIGH:

FLAG	RAISED WHEN	WHAT TO DO
Repeated Daily Cap / Cooldown Activity	A customer keeps hitting the daily cap or has several blocked taps	Usually harmless. Watch for staff tapping too eagerly.
High NFC Tag Volume / Rapid Taps	One tag has an unusually high number of stamps or rapid taps	Check where the tag is kept. Rotate it if in doubt.
Frequent Manual Stamp Overrides	One customer received 3 or more manual stamps	Check the reasons recorded, and talk to the staff involved.

Tag-leak warning (Tags tab)

A yellow banner appears on the Tags tab when a tag looks as if its address has been shared: **more than 8 different customers in 15 minutes**, or **more than 25 blocked rapid taps in an hour**. Tap **Rotate** in the banner, then rewrite the physical tag.

Usage & cost (Plan & Billing)

Shows this month's active customers, the cost so far, whether your cap is protecting you, and any plan change due next month.

Data exports (Export tab, managers and owners)

Download Cards CSV gives one row per customer card (join date, branch, total and available stamps). **Download Stamps CSV** lists every stamp with its time, tag, branch and reason. Open them in Excel or Google Sheets to see busy hours, your best branches and how many customers come back.

Suggested routine

WHEN	WHO	CHECK
Daily	Manager	Anomaly flags on Activity & Audit
Weekly	Manager	Tags tab for leak warnings; make sure every tag is still at the counter
Monthly	Owner	Plan & Billing usage; download both exports for your records
When staff change	Owner	Deactivate people who have left; invite new staff

08

Troubleshooting & FAQ

The most common situations and how to handle them.

SITUATION	WHAT TO DO
"Access denied" when signing in	Your access hasn't been activated yet, or has been switched off. Check you're using the invited email, then contact your owner or account manager.
I can't find the Rules, Brand or Tags screens	Go to `yoursite/staff/your-slug/settings` and bookmark it. If you're sent back to sign-in, your role doesn't include that screen.
The magic link email didn't arrive	Check your spam folder, wait a minute, then request a new link. Each link works once.
The phone doesn't react to the tag	Android: turn on NFC. iPhone: hold the tag at the top of the back. Phone cases thicker than about 3 mm can block NFC. If it still doesn't work, give a manual stamp.
The customer says a stamp is missing	Check **Activity & Audit** for their card number. Cooldown or daily-cap blocks are normal. If you find a real problem, contact support.
The reward QR has expired	Ask the customer to tap **Refresh QR Code**.
"Already claimed" on a reward	That code has been used already, often because of a screenshot. Ask the customer to show the live code on their own card.
"Insufficient stamps"	The customer doesn't have enough stamps for the reward yet.
A tag is lost or stolen	Tags tab → **Rotate**, then write and lock a new tag.
The customer changed phones and lost their card	If they backed up, they use **Recover** with the same Google account or email. If they didn't, the stamps can't be recovered.
A staff member has left	Owner: Staff tab → **Deactivate**.
"Shop paused" on customer screens	Your account is paused, so new stamps are stopped. Customers can still redeem rewards they've already earned for **30 days**. Contact your account manager to resume.
I want a custom web address, a different timezone or currency, or the Instagram perk	Contact your account manager. These are set up for you.

09
